

Atlas user manual

Atlas By Grammar Features

The Atlas / By Grammar Features page is divided into two sections: navigation (left) and map (right).

Search a feature

The navigation part consists of the search bar with button at the right and by the tree positioned below.

In the search bar, the user can enter the name of the feature he wants to find.

The user has two search modes available:

- All tree: search in the entire tree opening all nodes up to the relevant feature.
- Features: The search explodes the node that has the feature.

The modes are chosen using the button located on the right of the bar.

Selection/deselection of features

- Features can be selected/deselected via checkbox.
- Selecting/deselecting the parent checkbox will automatically select/deselect all child checkboxes.
- A maximum of 3 features can be selected. Upon reaching this limit, the remaining checkboxes will be disabled.

Submit

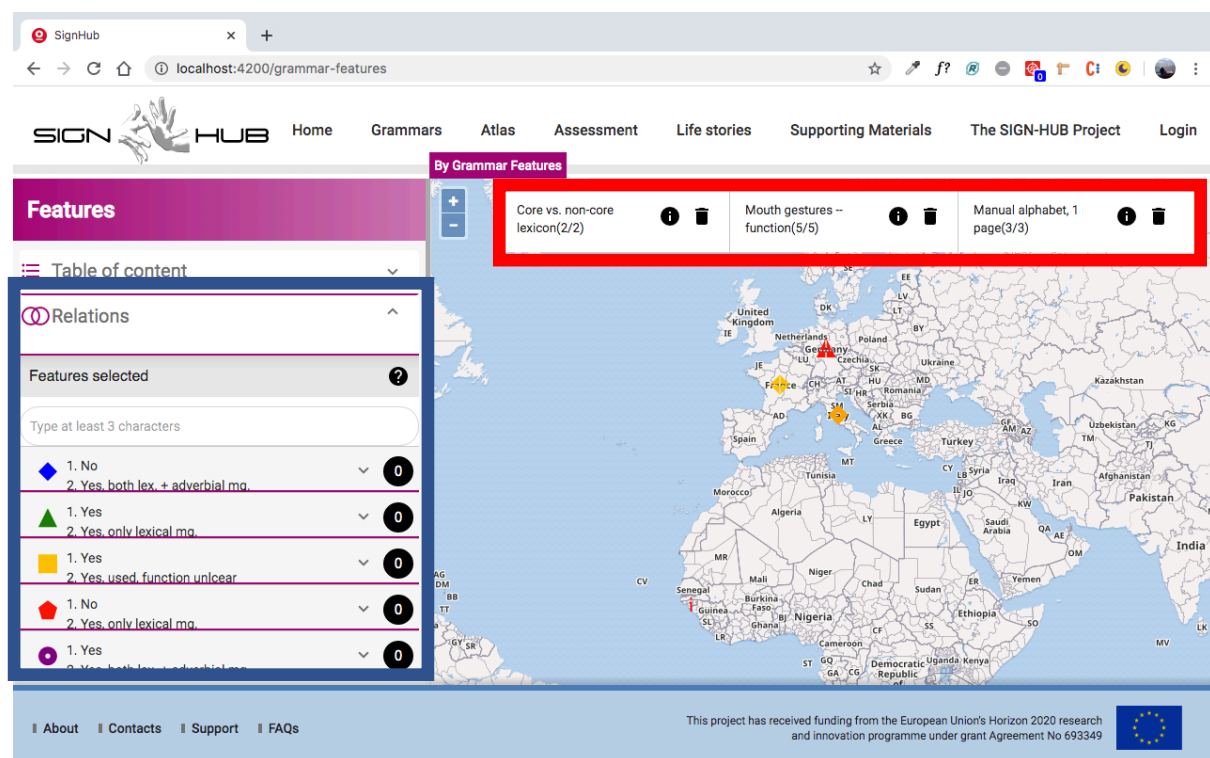

Selecting a maximum of 3 features and clicking the submit button.

In the Map part we will see the features selected by the user.

In the navigation part, under Relations, we will see the options of a feature and if more features are selected, we will see all their possible combinations.

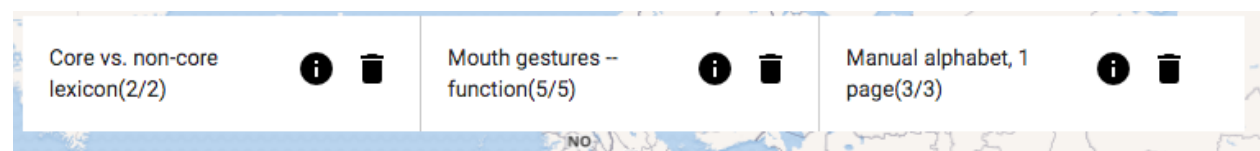

In both cases, for single feature or multiple features, for each option of the feature or for each combination of the options, the sign languages (*) are listed, which have the values that correspond to those options.

* The sign languages listed are links that lead the user to the detail page of the chosen language in BySignLanguage page.

Remove features

In the Map there is a bar that have two buttons for each features:

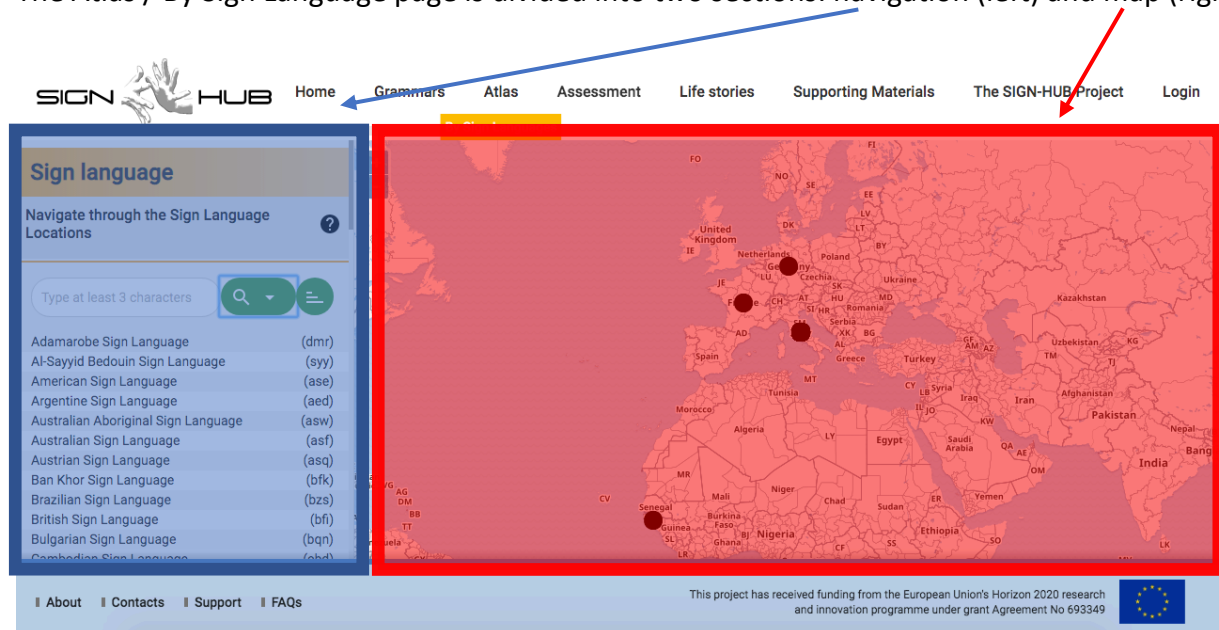

By clicking on the button **i**, a pop-up will appear containing information about the corresponding feature.

By clicking on the button **🗑️**, you remove and deselect the feature from the map and from the navigation respectively.

Atlas By Sign Language

The Atlas / By Sign Language page is divided into two sections: navigation (left) and map (right).

Search a Sing Language

The navigation part consists of the search bar with button at the right and the list of languages positioned below respect to the search bar.

In the search bar, the user can enter the name of the Sing Language he wants to find.

The user has 4 search modes available:

- Terms: search by language name
- SL code: search by code language
- Countries: search for countries
- Macro-areas: search for macro-areas

The modes are chosen by the first button located on the right of the bar.

The second button is used to sort the languages alphabetically from “a” to “z” or “z” to “a”.

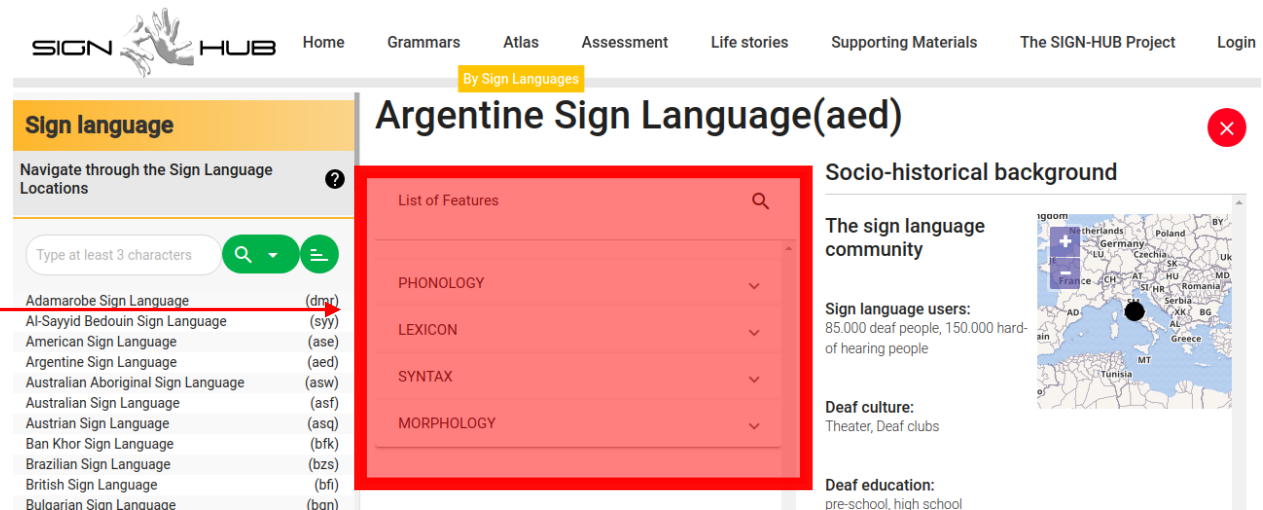

Click on the marker

The user has the option to click directly on the markers positioned on the map so as to facilitate the opening of a pop-up containing the link that will lead him to the detailed view of the language.

Click on Sign Language

Clicking on a language will open a window instead of the map with the details of the language and the search for features.

To see the features, the user can explode the list under the search bar which are the areas of the features.

The screenshot displays the SIGN HUB website interface. The top navigation bar includes links for Home, Grammars, Atlas, Assessment, Life stories, Supporting Materials, The SIGN-HUB Project, and Login. The main header shows 'By Sign Languages' and 'Argentine Sign Language(aed)'. A sidebar on the left, titled 'Sign language', lists various sign languages with their codes. A red arrow points to 'Argentine Sign Language (aed)'. The main content area features a 'List of Features' section with a search bar and a list of categories: PHONOLOGY, LEXICON, SYNTAX, and MORPHOLOGY. To the right, there is a 'Socio-historical background' section with a map of Europe and text about the sign language community, users, and education.
